Vale and Calder | External core supply and import records

ARCHIVE FILE | Commercial and operational record extract | All entities and identifiers are fictional.

Purchase files held by Calder / Vale

Party or entry	Recorded position
Shenzhen Orient Fluid Systems	Chinese producer of hydraulic subassemblies supplied to Vale and directly to Calder.
Buying entities	Vale Hydraulics Ltd for historical replenishments; Calder Flow Systems Ltd for later direct production jobs.
Import broker commodity description	The UK item master and most vendor invoices used 8413.91 for hydraulic assemblies. This code was entered on the supplier-supplied paperwork.
Binding tariff information	No BTI decision for PV-C107, PV-C207, PV-C208, PV-C308 or PV-C409 is included in the procurement archive.

The purchasing contracts identify drawing revisions separately from the vendor catalogue code. Technical test rigs and cargo configurations are not always the same: several samples were tested using an external electric drive removed before export from China.

Supplier acceptance and shipment paperwork

Drawing	Acceptance log / delivered configuration
PV-C104 / Q-231/021	Machined volute, loose seals and mounting elements; impeller and shaft assembled later.
PV-C107 / Q-231/037	Wet end with aligned impeller, bearing pack and hydraulic seal; vendor performance curve recorded on temporary external drive.
PV-C207 / Q-233/106	Sealed rotating wet-end assembly; hydraulic test certificate signed on vendor test rig.
PV-C208 / Q-244/082	Assembled hydraulic unit with completed pressure/flow testing at vendor, subject to later electrical integration.
PV-C305 / Q-254/035	Loose impeller and bearing kit packed with separate housing.
PV-C308 / Q-254/032	Pre-aligned wet end; drive-fixture performance data and separate packing list.
PV-C409 / Q-255/119	Hydraulic flow under external drive; final motor, controller and frame not supplied by Chinese vendor.
PV-C406 / Q-266/045	Loose rotating components and housing; no incoming factory operating-flow report.

Purchasing and engineering correspondence

15 April 2025 — UK brokerage enquiry: The vendor used the “pump part” item code across the full subassembly series. The brokerage file retained purchase descriptions and drawing references but did not include a revised classification decision. Procurement asked engineering to compare the extent of assembly at importation against the code used for historic entries.
