18 Dec 2024, 14:33 CET | L. Beck, DE Operations Finance

To: N. Adler; S. Moreno

Subject: Final catalogue deployment

We have loaded AX14 at $1,290 and CN08 at $1,190 for the first half. AX cost updates will be based on actual manufacturing units at year end. The shared catalogue will also show OP03 at $1,690 while Tokyo completes its standard-cost mapping. Please make sure the group circular goes into the purchasing systems before first dispatch.

The CN launch file has its own training and demonstration assumptions. I would prefer to keep those outside the plant production-cost schedule, but Treasury wants one intercompany settlement advice at year end.

22 Jan 2025, 09:10 JST | T. Nishida, JP Finance

To: S. Moreno; L. Beck

Subject: OP03 factory NRE and controller rights

For the 2025 cost sheet, Japanese factory engineering means our own recurring programme effort. US-paid Osaka geometry files are held in a different owner register and do not pass through our factory vendor payments. The running controller rights are billed to US by the Singapore company, not by our plant.

Please keep the Japan cost settlement on the shipment ledger so we can reconcile the unit economics to the forecast catalogue.

12 Mar 2025, 17:02 CET | M. Hahn, DE Commercial Director

To: S. Moreno; R. Hale

Subject: CN launch margins

The CN08 invoices do not earn the same factory return as AX. Some managers are comparing them to unrelated Scandinavian orders. Those customers pay for different service terms and are at different volumes. The new-product engineering code still includes project 703, which procurement has asked us to split between the current range and the next release.

In the US programme we could meet the planned sell-through threshold and earn the launch-support credit. I do not want the invoice schedule rewritten until the steering group signs its recommendation.

27 May 2025, 11:45 EDT | S. Moreno, US Finance Director

To: N. Adler; T. Nishida

Subject: OP programme note - FY25

I approved the draft with the understanding that the cost-plus price sheets would keep operating for each shipment. The residual income-tax settlement is something we will determine after we have the year's US sales and SG&A; numbers. I am not in a position to promise a fixed credit amount today.

The version in the DMS says January for accounting attribution. Purchasing is still sending Japan the normal purchase order on the standard schedule.

10 Aug 2025, 09:20 JST | T. Nishida, JP Finance

To: S. Moreno; N. Adler

Subject: Group acknowledgement and OP costs

I see the Group CFO has signed the programme note. Our July production journals still calculate OP03 at the plant percentage and we can generate those differences by shipment. We also accept that Group Tax may book a separate US result adjustment; we have not changed the manufacturing bill rate in the JP ERP master.

The meaning of the note for already shipped goods was discussed at the summer review, but no individual revised purchase orders were generated at that meeting.

18 March 2026, 16:16 EDT | R. Hale, US Controller

To: S. Moreno; US Tax; US Trade

Subject: FY25 settlement advice

The combined advice includes the AX and OP factory price variances, the CN launch-support credit, OP US result equalisation, the warranty service settlement, and two other group charges. The net balance is a $324,157 receivable for the US company; Treasury will clear it in its standard payment runs. All entries have been routed through FY25 close accounting.

The trade desk asked me whether the $324,157 should match its entry reconciliation population. My team prepared the close on the tax chart of accounts rather than on customs entry lines. The source postings are available in the finance workbook.

6 October 2026, 13:02 EDT | M. Sloan, US Trade Manager

To: R. Hale; S. Moreno

Subject: Asterion entry position

We sent the transfer-pricing study to Mariner, along with the updated product cost extract. The current ACE report already includes a small tooling amount on each AX entry from the broker's initial tariff-value profile. Japan says OP technology fees are handled in Singapore; I have not seen how those charges are represented in our customs entry values.

I am not comfortable approving a company-wide duty refund based on the net Treasury payment without entry support, but we need to deal with the upcoming filing workload.

5 November 2026, 18:40 EDT | J. Price, US Logistics Coordinator

To: M. Sloan; general compliance mailbox

Subject: Caller in reception

At about 15:15 a visitor introduced herself as an agent working with Customs investigations. She asked which team could supply Japanese programme licence records and the 2025 price correction emails. I told her Mariner usually handled import filings and gave her the general trade mailbox. She did not ask me to certify any figures. I entered the conversation in reception log RL-455.

I cannot say whether our trade team had previous contact with this person. I did not receive a document to sign.
