SUP-11 / SUP-19 / PPC-S1 · Última revisión: 2026-10-20 · Condiciones de compra y anexos operativos

SUP-11 — Altair Trading B.V. / Altair Andina S.A.S. (2025-12-18)

Commercial terms. Altair Trading B.V. (AT) accepts individual purchase orders by written acceptance or an ERP status designated as ACCEPT. Product dispatch, order creation and supplier acknowledgment are distinct events. Prices are FOB Rotterdam in USD and the accepted order determines the unit rate, subject to a written credit/debit adjustment entered against the same invoice.

Article families. AX410 factory-finished units shall be produced under an active factory identifier; AX420 OEM hubs and CM8 modules are subject to the appropriate engineering and safety release. A factory identifier appears in the planning system; the supplier separately issues an acceptance or rejection of each purchase order.

Grandfathered commitments. If a manufacturer registration is subsequently suspended, AT may complete an order formally accepted before the relevant effective notice where the notice expressly provides a completion window. The manufacture of new marked goods is not permitted outside the scope of registration.

Prices. Price schedule PR-24 (applicable to relevant shipments from 2026-07-01) describes an internal settlement line identified as “licence recovery / factory-finished AX410”, USD 6 per unit. The customer-facing invoice shows the complete FOB unit price. AT settles its own manufacturing-rights invoices with AG; those settlements are recorded separately from AA’s licence ledger.

SUP-19 — Pacific Precision Controls Ltd. / Altair Andina S.A.S. (2026-01-08)

Pacific Precision Controls Ltd. (PPC) is an independent manufacturer registered in Penang, Malaysia. It is not a shareholder, officer, subsidiary or joint venture of AG, AT or AA. Pricing and ordinary credit decisions are made by PPC. It may also manufacture unbranded articles for other purchasers.

3.2. PPC is permitted to manufacture and sell AX410 marked units and designated K-Crypt manufacturing configurations only within the scope of manufacturer approval conveyed through AG’s registry. PPC may continue to sell standard ST2 supplies and unbranded AX420 base units through its normal commercial channel. The manufacturer must hold documentation corresponding to each released production configuration.

3.4. PPC reserves capacity after acceptance of a purchase order. A proforma, factory forecast or request for approval does not bind PPC to accept a purchase order. Approved orders remain subject to any express completion allowance in a subsequent amendment or notice.

5.1. For factory-finished AX410 orders accepted from 2026-04-01, AA shall pay PPC, in addition to the FOB price, an amount equal to 1.25% of net downstream Colombian product invoicing traceable to those shipments. PPC describes this in its commercial files as the channel development participation; product warranty data and technical marketing visuals will be supplied at no separate rate. The charge shall be reconciled quarterly from AA’s customer invoicing and credited or debited by PPC.

PPC-S1 — manufacturing compliance schedule (2026-01-19)

PPC shall keep a controlled release for marked or encrypted SKUs, protect AG brand and technical assets, allow manufacturing audits and cease taking new production commitments outside the scope of the current manufacturer register. A manufacturing hold may also arise from quality control, missing trade finance, sanctions screening, or capacity. The supplier retains separate quality, credit, factory and production logs for its holds.

AA has provided PPC with a test fixture for the AX410 production line under the tooling schedule described in PPC register TOOL-T14. PPC has not purchased this fixture, and its quoted FOB pricing does not separately charge for its use. Design and calibration records are retained at AA and PPC.

Selected acceptance and correspondence conditions

Evento contractual	Registro
Aceptación	La confirmación ERP con marca ACCEPT, no la emisión de la PO, confirma el pedido.
Cierre / retención	PPC puede retener por crédito o calidad sin intervención de AG; retenciones por la autorización de marca se procesan por canal independiente.
Fabricación	La relación entre número de lote, versión técnica y orden consta en la hoja de liberación de producción.
Facturación	Factura comercial FOB; flete y seguro se documentan por separado en el expediente de importación.
